

BD/50 HE

Table dispensers for single sided PVC and polypropylene adhesive tapes. They are essential tools in every production or shipping department.

- ✓ Strong body structure, made of sheet steel (thickness 4 mm). It is coated by epoxy-polyester powder paint.
- ✓ It is provided with an additional heavy plate fixed under the dispenser. It gives stability for an efficient use, without affixing the dispenser on the table.
- ✓ These dispensers do not keep sand or similar materials. This is important if the dispensers are used in production departments or offices, where the release of sand or powders could damage machinery.
- ✓ The blade is made of hard steel. We take a particular care in the manufacturing of the teeth of the blade. The special process of production gives sharp and strong teeth for an efficient cut of the adhesive tape. The blade is easily replaceable.
