## HAND-HELD DISPENSER FOR HIGH BOND TAPE

| Features                                                                             |                                                                                     | Benefits                                                                                                                                                                                | Customer value                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cutting system with guillotine shear and automatic tape arrangement for the next use |   | The blade easily cuts any single-sided tape, double-sided tape or acrylic foam tape up to 20mm wide and 1.5mm thick. After each cut the tape is accurately positioned for the next use. | Single-sided, double-sided and acrylic foam tapes can be easily applied and cut with a single tool, removing the need for separate cutter, scissors and special rollers. There is no requirement to touch the tape during operations and the entire process becomes extremely quick, flawless and tidy. |
| Long structure in thin drawn metal                                                   |  | The dispenser can host up to 300m of tape without compromising its light weight and ensuring rapid operations.                                                                          | Long and thick tapes are not a problem. The dispenser remains light despite its remarkable robustness. You will be able to work for longer without having to replace the tape and you will not experience the fatigue of using heavier dispensers.                                                      |
| Ergonomic handle with trigger recess                                                 |  | The carefully shaped handle allows you to hold the dispenser firmly and efficiently. The special protection avoids unpleasant finger-pinching accidents while working.                  | Using the dispenser is made easier and more comfortable by the ergonomic design. Working will be safer and fatigue-free.                                                                                                                                                                                |

|                                         |                                                                                     |                                                                                                                                                                                                        |                                                                                                                                                                                                     |
|-----------------------------------------|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Side handle and adjustable guide</p> |    | <p>The dispenser can be held very firmly and safely. The tape can be applied along a straight line with extreme precision.</p>                                                                         | <p>Excellent precision even when applying the tape on challenging supports, like thin profiles or frames. You can apply pressure with both hands and always be sure of achieving high accuracy.</p> |
| <p>Rubber roller</p>                    |   | <p>The ideal roller for any tape, whether single-sided or double sided. The rubber roller ensures a flawless application, without unwanted bubbles and without any damage to the application zone.</p> | <p>You will be able, when required, to apply high pressure to any tape without damaging or scratching even the most delicate of base materials.</p>                                                 |
| <p>Adjustable brake</p>                 |  | <p>Enables precise setting of the tape tension.</p>                                                                                                                                                    | <p>Not all tapes require the same tension. By always selecting the optimal setting you will be able to obtain easier application without air bubbles and without creases.</p>                       |

## Specifications

| Code      | Description | Max tape width (mm) | Max tape Ø (mm) | Roller Ø (mm) | Net weight (Kg) | Items per box |
