

D2 TN

Hand dispensers for single sided PVC and polypropylene adhesive tapes. They are simple but efficient tools to close cartons, parcels, rolls and bundles. They are suitable for filament, strapping tapes or for tapes that unroll easily.

- ✓ Strong body structure, made of sheet steel (thickness 0,8 mm), coated by epoxy-polyester powder paint.
- ✓ The slots, on the sides of the body, permit checking the quantity of tape left.
- ✓ The inside brake, made of steel, keeps the tape in tension. It is also provided with a trigger. This permits braking the roll of tape and keeping it in tension.
- ✓ The applying roller, covered with soft rubber, permits the tape to stick perfectly.
- ✓ The toothed blade made of hard steel. We have developed a special process of production for the teeth. They are particularly sharp, strong and of small dimensions (step 1,5 mm) to ensure an efficient cut of the tape. In addition the blades are hard tempered.
- ✓ They accept tapes up to 142 mm of external diameter.

Technical characteristics

Code	Description	Max tape width mm	Max tape Ø mm	Core holder Ø"	Net weight Kg	Pieces per carton
